DETAILED ACTION

Response to Arguments

1. Applicant's arguments with respect to claims 1 and 3-7 have been considered but are moot in view of the new ground(s) of rejection. Applicant's attention is directed to Chakeres, col. 13 lines 7-12, which teaches the use of laser localizing light of the imager as a visualization means but does not explicitly teach the use of an adjustable light fan, which is taught by Riehl et al and has been addressed previously.

Claim Rejections - 35 USC § 103

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claims 1 and 3-7 are rejected under 35 U.S.C. 103(a) as being unpatentable over Chakeres in view of Riehl et al. Chakeres discloses a MRI based diagnostic imaging apparatus for guiding an interventional apparatus by positioning a patient within the imaging volume of the diagnostic apparatus, using the imaging means for acquiring a diagnostic image in an imaging plane comprising a target area of the patient, and using the visualization means for visualizing a projection of the imaging plane of the diagnostic image on the patient's skin (abstract, col. 7 lines 47-67, col. 8 lines 1-8, claim 16). The steps include calculating an approach trajectory for the interventional apparatus comprising an entry point on the patient's skin and a target point within the

Art Unit: 3737

target area and inserting the interventional apparatus in the patient according to the calculated approach trajectory (col. 8 lines 12-37).

Chakeres teaches the use of laser localizing light of the imager as a visualization means (col. 13 lines 7-12) but does not explicitly teach an adjustable light fan as the visualization means. In the same field of endeavor Riehl et al. disclose a patient alignment system utilizing light fan beams (col. 3 lines 37-68, col. 4 lines 1-13). It would have been obvious to one of ordinary skill in the art to use the teaching by Riehl et al. to modify the teaching by Chakeres for the purpose of enabling correct alignment (col. 13 lines 7-13).

Conclusion

3. Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire **THREE MONTHS** from the mailing date of this action. In the event a first reply is filed within **TWO MONTHS** of the mailing date of this final action and the advisory action is not mailed until after the end of the **THREE-MONTH** shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of

Art Unit: 3737

the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.
